

Postdoctoral position is available in the Theoretical Molecular Biophysics laboratory headed by Dr. David Lukatsky in the department of Chemistry at Ben-Gurion University of the Negev. We are interested in understanding design principles of protein interaction specificity, design principles of protein-protein and protein-DNA interaction networks, and general principles of biomolecular recognition in a living cell. We invite a highly motivated, recent Ph.D. graduate in physics, and interested in biophysics and systems biology to join our group. The position is available for two years with a possible extension for a third year.
